EDUCATION

2023 **UNIVERSITAS BUDILUHUR**
On Process

CORE SKILLS

Market Analysis
- Broker summary & order flow
- Foreign, institutional and local fund flow
- Price-level footprint
- Sector rotation
- Seasonality testing

Market Mechanics
- Tick size
- Auto-rejection bands (ARA/ARB)
- Transaction cost structures
- Sector index composition
- Exchange member classification

Quantitative residual
- Regression (beta, alpha, R^2)
- Correlation & analysis
- Statistical significance testing
- Backtesting
- Out-of-sample validation

Data & Engineering
- ETL pipeline design
- Data validation & quality scoring
- Web scraping & automation
- Automated testing
- Performance optimisation

Tools
- Python (advanced)
- Microsoft Office
- Git
- Selenium
- SQL

LANGUAGE

Indonesia — Advanced

English — Advanced

ABOUT ME

Computer Science student with a strong focus on applying programming, data, and automation to capital markets. Experienced in developing stock-related applications, integrating financial market APIs, building market dashboards and stock screeners, and conducting company and financial analysis. Interested in leveraging technology to improve the efficiency and scalability of investment research and market analysis

EXPERIENCE

Media Group (**METRO TV**)
as IT Support

Worked as an IT Support at Metro, responsible for troubleshooting, repairing, and maintaining computers and other IT equipment across multiple divisions. Handled hardware and software issues, performed routine equipment checks, assisted with installations and replacements, and provided on-site technical support to ensure computers remained operational and minimized downtime.

Also assisted with basic server maintenance and troubleshooting in the server room, as well as resolving WLAN and network cabling issues that affected computer connectivity. Responsible for checking, reconnecting, and repairing network cables, supporting stable connections between workstations and network infrastructure, and responding to technical issues from different divisions to keep daily operations running smoothly.

SELECTED PROJECT

Market Data Pipeline & Validation Engine
- Automated daily collection of prices for 958 listed stocks and broker summaries for 101 exchange members, building a 20-year archive of 2.6 million price bars.
- Validated every input against auto-rejection bands to separate real market moves from data errors; found seven missing broker codes that had silently excluded data from market-wide figures. 1,250+ automated tests.

Order Flow & Market Microstructure Analysis
- Measured market-wide net flow of foreign, state-owned and local brokers, with coverage reporting so missing files are never read as quiet days.
- Reconstructed buy and sell activity at each price level, using value-per-transaction to separate institutional tickets from retail flow; tested whether flow leads IHSG next session and reported it inconclusive.

Sector Research & Seasonality Tool
- Built sector indices from constituent weights and regressed each against IHSG — beta, alpha, and separate upside and downside sensitivity.
- Tested 20 years of monthly and quarterly seasonality, reporting median and hit rate beside averages, with significance thresholds corrected for best-of-many selection.

Stock Screener & Backtesting Engine
- Screened the full market by broker activity and ten volume- and frequency-based indicators, each normalised against the stock's own history.
- Backtested with real costs (0.15% buy, 0.25% sell, plus slippage), train/test separation, and a requirement that results hold in both rising and falling markets.
